PROFESSIONAL SUMMARY

Motivated and dedicated third-year B.Tech student in Artificial Intelligence & Machine Learning at ITS Engineering College. Skilled in C Programming, Data Structures and Algorithms (DSA), Python, and Machine Learning concepts. Hands-on experience in developing AI-based and speech-recognition applications with strong analytical and problem-solving abilities. Passionate about software development, emerging technologies, and creating user-friendly intelligent systems.

TECHNICAL SKILLS

C Programming	Data Structures and Algorithms (DSA)	Python Programming	Machine Learning Fundamentals
Object-Oriented Programming (OOP)	Speech Recognition	Data Preprocessing & Feature Extraction	
Debugging & Testing	Data Analysis Basics	Problem Solving	

PROJECTS

1. Voice-Controlled Gaming Tools for Enhanced Learning in the Skill Ecosystem

Technologies Used: Python, Speech Recognition, Machine Learning

Description: Developed an AI-based voice-controlled gaming application designed to create an engaging and interactive learning environment. The system enables users to perform game actions through voice commands, improving accessibility and hands-free interaction.

- Designed and developed the complete application using Python.
- Implemented speech recognition modules for processing voice commands.
- Built interactive game-based learning activities.
- Improved user accessibility with hands-free navigation and control.
- Performed data preprocessing to improve voice command accuracy.
- Conducted testing and debugging for smoother performance.
- Optimized system response time and voice recognition efficiency.
- Collaborated on project documentation and evaluation.

Achievements & Outcome: Enhanced understanding of AI, speech recognition, and human-computer interaction; improved practical development and debugging skills; increased user engagement through interactive learning methods.

2. Email Spam Detection System

Technologies Used: Python, Machine Learning, Data Analysis

Description: Developed a machine learning-based email spam detection system capable of automatically classifying emails as spam or legitimate. The project aimed to improve inbox management and reduce unwanted email content using predictive analytics techniques.

- Collected and cleaned email datasets for model training.
- Removed duplicate and irrelevant data for better performance.
- Applied text preprocessing and feature extraction techniques.

- Trained machine learning models for email classification.
- Evaluated model accuracy using performance metrics.
- Implemented automated spam filtering functionality.
- Performed testing and validation to improve prediction accuracy.
- Analyzed model outputs and optimized classification results.

Achievements & Outcome: Successfully classified spam and non-spam emails with good accuracy; strengthened understanding of data preprocessing and model evaluation workflows.

SOFT SKILLS

Analytical Thinking

Problem Solving

Communication Skills

Teamwork & Collaboration

Time Management

Adaptability

Quick Learner

LANGUAGES

Hindi, English

EDUCATION

Bachelor of Technology (B.Tech) - Artificial Intelligence & Machine Learning

ITS Engineering College | Currently Pursuing 3rd Year

Class XII (CBSE)

Modern Public School

Class X (CBSE)

Modern Public School
